Abstract (en)

[origin: WO2013081481A1] The invention relates to a connection of remotely controlled head with central heating radiator valve, designed for use on single central heating radiators. The connection of a remotely controlled head with central heating radiator valve characterized in that characterized in that in the pipe connector (3) there is a sleeve (6) containing the external support flange (7) on one end, basing on an internal flange (8) of the pipe connector (3) while on the other end it contains an external spline (9) wherein between the external spline (9) and the front wall (10) of the body (5) of the head a lock ring (11) is mounted. In addition, the lock ring (11) includes an internal spline (12) with a module corresponding to the module of the external spline (9) of the sleeve (6), wherein the lock ring (11) contains an external lobe (13), coming in contact with the internal lobe (14) of the lid (15) of the head body (5).
