Abstract (en)
[origin: EP2787312A1] A refrigerator according to the present invention uses partition wall (118) that divides the interior of a heat-insulating box into a plurality of storage compartments, to which cool air is supplied, and includes openable door (105a) in front of each of the storage compartments. On door (105a), door gasket (124) is provided which is in tight contact with metal receiving member (123) that is provided on the front face facing the doors, of partition wall (118). The storage compartments include storage cases. A configuration such that metal receiving member (123) is heated is provided. Heat exchange suppression space (140) is also provided which suppresses heat exchange between cool air in the associated storage compartment and metal receiving member (123).
