Abstract (en)

[origin: WO2013083122A1] The invention relates to a peg-shaped or cylindrical hygiene element for insertion into a bodily cavity or opening, said element comprising a fibrous layer (2) that consists of cellulose fibres which are interconnected in some sections by means of pressing, with the cellulose fibres in these pressed regions (4) being compacted. The fibrous layer (2) is in the form of a fibre web that is laid so as to form channels (11) extending in the longitudinal direction of said hygiene element.
