Abstract (en)

[origin: WO2013083314A1] The invention relates to an apparatus for carrying out a centrifuging process, comprising: at least one container device (10) which has at least one substance reservoir (20, 30, 40) for holding at least one chemical substance and a data storage device (50) for storing process data relating to the centrifuging process; a reading device (60) which is designed to read the process data from the data storage device and to transmit said process data to a control device (70); and the control device which is designed to carry out the centrifuging process with the at least one chemical substance, in accordance with the transmitted process data, using a centrifuging device (80) which receives the container device (10).
