Abstract (en)
[origin: WO2013082730A1] The invention relates to an apparatus (1) for removing deposits in containers by blasting technology, said apparatus comprising at least one cleaning lance (2) having a handle-side and a cleaning-side end section (3a, 3b). A flexible thin-walled container (5) is mounted at the cleaning-side end section (3b) on a container connection (9a, 9b) and forms a receiving chamber (6) for an explosive gas mixture. The apparatus (1) further comprises a feed line (7) for feeding a flowable, explosive mixture or the starting components thereof to the receiving chamber (6) of the thin-walled container (5), and ignition means for triggering the explosion in the thin-walled container (5) and a control device for controlling ignition. The apparatus (1) is characterized by a plurality of container connections (9a, 9b) for connection to one thin-walled container (5) each, the control device being designed to be common such that explosion in the thin-walled containers (5) can be triggered by the common control device either simultaneously or delayed in time.
