Abstract (en)  
[origin: EP2602878A1] The assembly (1) has connector (7) with movable fuse element (22) corresponding to contact element (13). The contact element is arranged in the inner space of the housing element (8). The fuse element is in securing position in which it is engaged with locking portion of pin, so that connection between connector and pin is secured, if contact element is in contact with pin. The fuse element is moved from securing position to release position. The locking between fuse element and pin is released so that fuse element is moved between contact element and pin in the release position.
