Abstract (en)
[origin: WO2013083257A1] The invention relates to a method for manufacturing a plug connector (10) that has two electrically mutually insulated conductor contacts (1, 2), which is characterized in that the conductor contacts (1, 2) are cut from a metal sheet in such a way that said contacts are connected to each other via a connecting part (4) made of the metal sheet, the conductor contacts (1, 2) are partially embedded in an electrically insulating material in order to form an electrically insulating housing (6) that fixes the conductor contacts to one another, and the connecting part (4) is then severed.
