Abstract (en)
A motor fan is built in a lower part of cleaner body (1), and produces suction airflow. Suction tool (2) is mounted below cleaner body (1). Dust collection section (3) is mounted above cleaner body (1), and collects dust suctioned by suction airflow produced by the motor fan. First flow path (26) is provided to cleaner body (1), and communicates with suction tool (2) and dust collection section (3). Second flow path (27) is provided to cleaner body (1), and communicates with dust collection section (3) and a suction side of the motor fan. Second flow path (27) is formed over substantially the entire length of cleaner body (1) in a longitudinal direction.
