Abstract (en)

[origin: CN103922126A] The present invention relates to a device for sterilizing molded pieces, especially the plastic screw caps of beverage containers. The device comprises a processing segment 4 and an input device 3, the processing segment is used to process the molded pieces with the help of a processing medium, and the input device is arranged at the upstream of the processing segment 4 and is used to transmit the molded pieces to the processing segment 4, wherein an extraction device 5 is arranged at the downstream of the processing segment 4, and is used to extract the molded pieces from the processing segment 4.
