Abstract (en)
Girth formed by two pieces (1) and (2) that can be fastened together, the first in contact with the horse and the second a carrier of the means for fastening to the saddle, with both pieces being symmetrical and having holes or vents (5) for the perspiration of the horse. In addition, this piece (2) has assembled on it some trapezoidal rings (12) that are fastened by means of strips (13), and other pairs of external rings (12'), also in the shape of a right trapezoid and positioned in an inverse position with respect to the internal ones, which are related to these internal rings by elastic straps (14), so that through the external rings (12') pass the adjustment belts (15) that are fastened to the fastening buckles (17) by means of elements or double-pass buckles (18) with the adjustment being fixed by means of screws (19).
