Abstract (en)

[origin: CN104100903A] The invention relates to a light module (1) of a lighting device in a motor vehicle. The light module (1) includes at least two light sources (2, 3, 4) for emitting light and at least two primary optics (8; 15, 16; 17, 18) belonging to the light sources (2, 3, 4) for focusing at least partial light. Further, the light module (1) includes a common secondary optic unit (7) for projecting the light beams onto a roadway ahead and for producing a resulting overall light distribution of the light module (1). In order to improve the flexibility and efficiency of the light module (1), at least one of the light sources (2) is configured for creating a main light distribution and at least another one of the light sources (3; 4) is configured for creating a mist light distribution. The primary optic units (15, 16; 17, 18), which belong to the light source (3; 4) for creating a mist light distribution, are arranged in several parts, wherein a first partial primary optic unit (15, 17) is arranged next the primary optic unit (8) which belongs to the light source (2) for creating the main light distribution.
