Abstract (en)  
Provided is a refrigerator including an evaporator (111) which is provided inside a storage compartment (106) set to a refrigerating or freezing temperature zone and has a film facilitating scattering or dropping of condensed water formed on a surface to scatter or drop from the surface, and a blowing fan (112) which blows cool air cooled by the evaporator (111). Then, by blowing a blowing direction of the blowing fan (112) in a direction having a gravity direction component, since the blowing direction of the blowing fan (112) has the same direction component as self weight of the condensed water, scattering of the condensed water from the surface of the evaporator (111) is promoted.
