Abstract (en)  
A refrigerator includes a refrigerator body and a door. The refrigerator body is configured as a heat-insulating case by putting a vacuum heat-insulating material between an inner box and an outer box thereof. The door is for opening and closing a front opening portion of the heat-insulating case. The door includes a vacuum heat-insulating material put between an inner plate and an outer plate thereof. An end of the vacuum heat-insulating material of the door, which is positioned at a side of a side wall of the heat-insulating case, extends to an outer side with respect to an inner plate surface of the side wall.
