Abstract (en)
[origin: WO2013087132A1] The invention relates to a resectoscope (1) that comprises a shaft (2), an electrode arrangement (6) mounted such that it can be displaced in the shaft (2) direction, and a carriage (10) able to be displaced in the same direction and designed to have a carriage contact (16) and a receiving bore (14) which extends in parallel to the shaft direction and into which the proximal end region (15) of said electrode arrangement (6) may be inserted by means of an electrode contact (27) for making contact with said carriage contact (16). One of these contacts (16, 27) is designed as a plug-in socket and the other as a corresponding plug-in pin, and the resectoscope is characterised in that the carriage contact is designed as a plug-in pin (16).
