Abstract (en)  
[origin: EP2620233A1] The method involves specifying outlet-side target thicknesses (h0,h1) for the rolling stock (6) for each rolling stand (W1-W3). The setpoints for the outlet-side rolling stock speeds (V1-V3) are determined from the outlet-side target thicknesses in accordance with the law of mass flow. The model for the advance value is selected. The setpoints for the roller speeds are determined from the model of the advance value and the setpoints. The roller speeds (Vw1-Vw3) are adjusted to the setpoints for the roller speeds.
