Abstract (en)

[origin: WO2013087372A1] The present invention relates to a method for producing light-emitting elements of improved processability and to the use thereof in lighting units, for example, for liquid crystal display screens or monitors. The present invention in particular relates to a method for producing light-emitting elements having a maximum thickness of 1mm and containing at least 80 wt.% polymethylmethacrylate and no scattering particles.
