Abstract (en)

[origin: WO2013088012A1] The invention relates to a means for helping to fit a device on a structure (2), the device comprising at least one protruding element comprising a front part intended to be inserted into a hollow part (7) of the structure, characterized in that the hollow part (7) of the structure is at least partially surrounded by a guide member (8) to make it easier to position the protruding element in said hollow part (7) of the structure, said front part of said protruding element coming into abutment and sliding, during the fitting operation, along the surface of the guide member (8) as far as said hollow part of the structure.
