Abstract (en)
[origin: WO2013088107A1] Scooters typically have a fixed rear wheel and a rotating front wheel on a length forming a handle. Such scooters are not always able to be used to perform tricks and stunts because they have a fixed rear wheel that can inhibit this. In particular many children and adults wish to drift the rear wheel, or have it at oblique angle to the scooter's direction of movement. The present invention provides a scooter wheel mounting capable of forming in use a two wheeled scooter, wherein the rear wheel being provided on a rotatable seat.
