Abstract (en)  
[origin: WO2014071345A1] An end closure for food and beverage containers is provided. The end closure comprises a contoured neck feature configured for increased strength and alignment with a user's lips. The contoured neck may further comprise features increasing container buckling strength and reducing user spillage. The present invention relates generally to beverage container necks. More specifically, the present invention relates to beverage container necks with contoured neck features configured for increased buckling strength and alignment with a user's lips.
