Abstract (en)
[origin: WO2013087908A2] The invention relates to a support (1) for offshore foundation structures, particularly for tripods, having a bearing surface for receiving weight force, a base for the transfer of weight force into the ground, and a supporting structure for the force transfer from the bearing surface to the base. The invention particularly relates to such a support (1) having two separate frame elements (3), each having a bearing sub-surface (17) and a base sub-surface and a bridge member (5) which can be coupled to the frame elements (3) in the region of the bearing sub-surfaces (17) for the force transfer between the frame elements (3) in an essentially horizontal direction.
