Abstract (en)

[origin: WO2013087048A1] The invention relates to a device and to method for braking rotating and/or slewing gears of production machines, comprising at least one dynamic service brake for braking a rotating and/or slewing movement of the rotating and/or slewing gear and at least one static stop brake by means of which the rotating and/or slewing gear can be stopped in a position. The dynamic service brake and/or the static stop brake is assigned at least one sensor, which detects the current movement of the rotating and/or slewing gear, and wherein the sensor is connected to a control unit that recognises an actuation of the dynamic service brake and, upon a continued rotating and/or slewing movement of the rotating and or slewing gear while the dynamic service brake is continuously actuated, activates the static stop brake.
