Abstract (en)

[origin: WO2013087280A1] The invention is based on a hand-held distance-measuring device with at least one computing unit (12), an image-capturing means (14) and a projection device (16) which projects at least one measuring point (18, 20) onto a measured object (22) in at least one operating state. It is proposed that the computing unit (12) be provided for determining a distance (24, 25, 26) of the measuring point (18, 20) at least on the basis of an output characteristic variable of the image-capturing means (14).
