Abstract (en)

[origin: EP2605082A1] The bearing has a circular support (101) provided with a housing (106) to receive a pivot system (103) that includes a pivot assembly (103a) in which a pivot is inserted. An elastic unit (107) comprises an elastomer ring (110) designed for mounting the assembly in a suspended manner and for applying an axial force to the pivot system. The elastic unit is made of elastomer material. The elastomer ring comprises a central opening arranged such that the assembly is fitted in the opening. The part has an outer wall (106a) whose shape corresponds to a shape of housing.
