Abstract (en)

[origin: WO2013087935A1] The method for embedding an image to be embedded in a video sequence, for a mobile terminal in the form of a tablet or smartphone, comprises the following steps: 100: choosing an image to be embedded; 300: reading the video sequence; 400: displaying the frame; 500: determining the presence of an embedding zone in the frame, said embedding zone having been previously identified or deduced according to a predefined algorithm; 600: applying a deformation to the image to be embedded, in such a way as to make said image to be embedded coincide with the form of the embedding zone; 700: displaying the image combining the frame and the image to be embedded, disposed where the embedding zone used to be.
