Abstract (en)  
[origin: WO2013087576A1] The invention relates to a fluid-tight via through a plastic body, comprising at least one flat contact which has one or more cross-sectional changes on an encapsulated part. The plastic body consists of a non-shrinking duroplast material, and the longitudinal edges of the at least one flat contact are rounded. In this manner, flat contacts can be used in a fluid-tight manner in high-pressure, high-temperature environments.
