Abstract (en)
[origin: CN104110160A] The invention provides a fencing system, comprising at least two support columns (10); at least two separating pieces (11) used for connecting two ends opposite to the support columns(10); and an apparatus used for arranging the two separating pieces (11) face to face on separating surfaces almost parallelly arranged. The fencing system is simple and economic and can create a plurality of beautiful fenceings; the at least two separating pieces are arranged face to face, which can increase reliability of the fencing.
