Abstract (en)
The invention relates to a window system for a terrace or similar space, and a structural element of the window system. The window elements (121 - 124) are placed between a top rail (130) and a bottom rail (140). Each window element (121 - 124) comprises a sash strip (121a, 122a, 123a, 124a) at its bottom edge, in order to be supported by the bottom rail (140). The structural element (150) is fixed to the sash strip (121a- 124a), and it extends between ridges (141 - 144) in the bottom rail (140). The structural element (150) and at least two ridges (141 - 144) on both sides of the structural element (150) in the bottom rail (140) jointly prevent the rise of said structural element (150) from between said ridges (141 - 144).
