Abstract (en)

[origin: EP2793147A2] A computer-implemented system and method for visual search construction, document triage, and coverage tracking is provided. One or more search topics are received from a user. The search topics are positioned along a graph to generate a query. A search for resulting topics that are related to one or more of the search topics is conducted using the query. The topic results are displayed in the graph in relation to the placed search topics of the query.
