Abstract (en)
[origin: WO2013093225A1] The invention relates to a catalyst including at least one metal selected from the group consisting of metals from Group VIB and Group VIII of the periodic table, alone or in a mixture, and a support including at least one NU-86 zeolite, at least one Y zeolite, and at least one porous inorganic matrix containing at least aluminum and/or at least silicon. The invention also relates to a method for the hydrocracking of hydrocarbon feedstocks using said catalyst.
