Abstract (en)
[origin: WO2014131627A1] A handheld pressing device for connecting two workpieces, in particular a pipe (14) and a press fitting (19) by means of a pressing process, has a pressing tool (13) with multiple pressing jaws (16). The pressing tool (13) is connected to a converter driven by an electric motor. The electric motor and the converter are partly surrounded by a housing. The pressing device has at least one data detecting element, at least one data detecting element being a camera (20). Furthermore, the camera (20) is used as a data detecting element for documenting pressing processes in a method.
