Abstract (en)
[origin: WO2013092432A1] The invention relates to a ship for transporting passengers, comprising a floor (21) which is accessible to persons and which includes plates (5) having a perforation (51) for sending water onto the upper surface (50) thereof. According to the invention, the floor (21) is in a pool (2) located at a height (H3) above the plates (5) that are connected to a duct (53) connected to a pump (12) for sending water into the perforation (51), the pool (2) having a hole (4) connected to a pipe (15) on which a valve (150) is provided, wherein said valve is capable of assuming either an open position for discharging the water through the pipe (15) in order to form a water film that does not exceed a water height (H1) which is lower than the height (H3), or a closed position in which the discharge of the water through the pipe (15) is prevented so as to have, on the plates (5), an amount of water having a height (H2) which is lower than the height (H3) and which is higher than the height (H1).
