Abstract (en)
[origin: EP2607261A1] The present invention relates to a sachet 1 having a triangular shape and comprising an interior space 6 enclosed by one sheet of flexible blank material, the sheet being folded upon itself to form a front layer 2 and a rear layer 3 of the sachet 1. The front layer 2 and the rear layer 3 are joined by sealing 4 located along two edges 5 of the sachet 1 to define the interior space 6. The sachet 1 comprises means 7 for starting opening of the sachet 1 as well as a tear strip 11 arranged between the front layer 2 and the rear layer 3 of the sachet 1 in proximity to and running at least partially along the sealing 4 at one of the two edges 5 joined by sealing 4. The shape of the sachet 1 and the arrangement of the tear strip 11 are so that the sachet 1 obtains a cone-like shape after opening so that it is easy both to hold by hand and to reach into to take out content from the sachet 1. The invention further relates to a method of manufacturing such a sachet 1. The sachet 1 may e.g. be manufactured in a chain of sachets.
