Abstract (en)
[origin: WO2013092164A1] A cage door-shaft door coupling (11) for arrangement on a door wing (9) with a door leaf plane (26) comprises a pivoting lever (14), which is rotatably mounted on a rotational axis (16) on a support element (40), and a moveable element (18), which is coupled to the pivoting lever (14) in such a manner that a movement (S) of the moveable element (18) carried out parallel to the door leaf plane (26) causes the pivoting lever (14) to perform a rotational movement (D) for coupling a cage door to a shaft door and change the distance between the lever and the door leaf plane (26) by means of a horizontal movement (H).
