Abstract (en)

[origin: WO2013093215A1] Workspace dividing partition (1) resting via a lower edge (1a) on the top face of a wall forming a work surface (9) and incorporating a device for attaching the partition (1) to said work surface (9). This partition is characterized in that said device comprises: - placement means comprising a translationary mobile branch which with the lower edge (1a) of the partition (1) forms a mechanism of the clamp type situated on either side of an external overhang (9a) of the work surface (1), said branch being able to move between a position in which it presses with contact against the underside of the work surface (1) in order to attach the partition (1) and a position distant from said face in order to release the partition (1); - placement control means, situated near said overhang and reproducing, in a direction appearing parallel to the work surface (1), the movement and positioning of the mobile branch with respect to said work surface (1).
