Abstract (en)

[origin: WO2013092171A1] For forming support structures for false ceilings, an inverted T main runner consisting of a central web (4) extending from an upper tube 6 and terminating in two horizontal flanges (8), characterised in that each end of the web comprises two parallel longitudinal cuts (10) defining an elastically deformable band (12) terminating in a depressed seat (16) projecting from the web surface, said seat being provided with a tooth (20) facing the web, and further characterised by comprising a substantially rectangular tab (22) for engagement in the depressed seat (16) of the adjacent main runner, said tab (22) comprising a cut (26) engagable by the tooth of the adjacent main runner when said tab (22) is inserted into said depressed seat (16).
