Abstract (en)
[origin: WO2013092614A1] The pump has at least one pump element (10) with a pump piston (12) driven in a stroke movement and a pump housing (22, 40) which has an interior space (42) in which a drive area (14, 18, 36) is arranged. The pump piston (12) moves alternately into the interior space (42) and out of the interior space (42) in the pump's stroke movement. The interior space (42) has at least one supply (28) and at least one outlet (50) for fluid medium. The connection of the interior space (42) to the at least one outlet (50) is controlled depending on the stroke of the piston pump (12).
