Abstract (en)

[origin: WO2013092925A1] A sensor element with air pressure measurement comprises a layer stack (10) from a plurality of layers (11, 12, 13) arranged one on top of the other. At least one first layer (11) contains a measurement sensor device (20) for measuring a measurement parameter different from an ambient pressure of the sensor. The first or at least one second layer (12) contains a pressure measurement device (30) for measuring the air pressure in an environment on one side (S1) of the sensor element, or a channel (40) for coupling a pressure measurement device (30) to an environment on one side (S1) of the sensor element.
