Abstract (en)
[origin: WO2013092172A1] The invention relates to a method for improving the pivotal movement of a mobile body (1) for a scientific instrument, comprising a shaft (10) capable of pivoting or oscillating about an axis (D) of the mobile body, wherein said method comprises: statically balancing said mobile body so as to bring the center of gravity thereof onto said axis (D); determining a target value for the resulting imbalance moment of said mobile body about said axis (D), which corresponds to a predetermined target divergence between a first main longitudinal axis of inertia of said mobile body and said axis (D); rotating said mobile body about said axis (D) of the mobile body at a predetermined speed, and measuring the resulting imbalance moment relative to said axis (D); and adjusting the value of the imbalance moment of said mobile body about said axis (D) to within a given predetermined tolerance relative to said target value.
