Abstract (en)

[origin: WO2013095595A1] A platform including an always-available theft protection system is described. In one embodiment, the system comprises a power management logic to selectively power elements of the system, a disarming logic to disarm the platform from an armed mode when a disarming command is received via an interface, the interface powered when the platform is in the armed and suspecting modes to detect the disarming command. The system further comprises, in one embodiment, a risk behavior logic to detect a potential problem via a interface, the interface powered when the platform is in the armed mode to detect the potential problem, and a core logic component to provide logic to analyze the potential problem, and to move the platform to a suspecting mode, when the potential problem indicates a theft suspicion, the core logic powered when the risk behavior logic detects the potential problem.
