Abstract (en)

[origin: WO2013091620A1] The invention relates to a method and to a device for determining a vertical profile of a vehicle environment by means of a 3D camera. At least one image of the environment of the vehicle is recorded by the 3D camera. The image data of the 3D camera is used to determine whether there is at least one discontinuity (7, 8) in the vertical course (6) of the environment surface transversely (2) to the direction of travel (10) of the vehicle.
