Abstract (en)

[origin: WO2013093033A1] A device for protection against particles generated by an electric arc when a first electrically conductive part (31) and a second electrically conductive part (32) of an electrical connection assembly are separated from one another, the protection device comprising at least one protection element (43, 44, 45) arranged near the place of separation of the first part (31) and the second part (32) to form a screen against said particles.
