Abstract (en)

[origin: WO2013093365A1] The invention relates to a starter (290) for an internal combustion engine, said starter comprising: a) an electric motor (150); b) a drive assembly including a pinion (160) movable between a so-called free position and a so-called meshed position, wherein said pinion (160) is rotatably linked to the electric motor (150) and to the internal combustion engine (290); c) an electric switching device (230) including a main actuator (220) capable, when engaged, of moving and holding a means, referred to as plunger (130), in position, said plunger being linked with the movement of the pinion (160) between the free position and the meshed position, by means of a linking means, referred to as lever (260); d) a means connected to the plunger, which is capable of establishing electrical power contact between the electric motor (150) and a power source (100) when the pinion (160) is in the meshed position; e) and including an auxiliary actuator (240) capable, when engaged, of opening the power contact and a means (211, 212) for separately controlling the main actuator (220) and the auxiliary actuator (240).
