Abstract (en)

[origin: EP2796080A2] A dishwasher including a washing chamber (11a) to perform dishwashing, a water collecting portion (15a) provided at a lower portion of the washing chamber (11a) to gather water used for washing, and a sensing module (30) which is disposed in the water collecting portion (15a) and integrally includes a water sensing sensor (31) to sense whether or not water is present and a temperature sensor (32) to sense a temperature of water. Since the sensing module (30) simultaneously serves as the water sensing sensor (31) and the temperature sensor (32), it may be possible to more efficiently utilize an inner space of the water collecting portion.
