Abstract (en)  
[origin: US2014321969A1] A turbomachine in the form of a stationary gas turbine or an aircraft engine, respectively a housing structure therefor; the housing structure including an outer housing wall (1) and an inner wall (2) defining the flow channel; and a hollow space (4) being formed between the inner wall and the outer housing wall. The hollow space is separable into at least two regions (5, 6); a movable wire element (slide ring seal) (10, 10'), which is adapted to rest against the contact faces (8, 9), being configured in the hollow space for purposes of the separation.
