Abstract (en)
[origin: EP2797049A2] In accordance with the invention a mask or table are maintained to record information about whether or not each pixel within a tile is cleared and it is determined whether the tile of pixels or samples display a constant or varying alpha value. As used herein, a "cleared" tile is one that is not covered by any other depicted objects. The clear mask may store a bit per pixel or sample to indicate whether the pixel or sample contains a color value or whether it is cleared. As a result, the compression ratio may be increased for partially covered tiles in some embodiments.
