Abstract (en)  
[origin: WO2013098346A1] The invention relates to a method for producing a fibrous strip (420) capable of constituting a band having a thickness of between 0.1 mm and 1 mm and a width of between 2 mm and 10 mm, said method including the steps of: a) cutting the wood bark or canes (200) into square-edged portions (300) having a defined length; b) separating the strip (420) from a surface of the square-edged portion (300) by means of an orthogonal cut, the depth of which is equal to the thickness of the strip, the cut rate (450) being parallel to the grain of the square-edged portion (300). The invention also relates to a fibrous reinforcement produced by such a method, and to a device for implementing said method.
