Abstract (en)
[origin: WO2013098183A1] The invention relates to a valve closing body comprising a bearing point (2) for connecting the valve closing body to a drive, comprising a valve closing body shaft (3), and comprising a valve closing body head (4) with an upper face (9), which faces the valve closing body shaft (3) and which forms a sealing circle (Dseal) of the valve closing body, and with a lower face. The valve closing body head (4) is formed at least by two segments of at least one geometric body. The invention likewise relates to a valve body seat which is produced according to the same principle as the valve closing body head.
