Abstract (en)

[origin: WO2013098240A1] The present invention relates to a communication system (1) comprising a cooktop (2) having one or more than one induction coil (4), and a control unit (5), and an appliance (3), suitable for being operated wirelessly on the cooktop (2), a user interface (7) having a display and a keypad that provide monitoring and controlling of the operating parameters like temperature, motor speed and a microcontroller (8) that contains the identification information and operating parameters recorded in its memory, and a voltage regulating circuitry (9) that supplies the microcontroller (8) and the user interface (7) with low value voltage by the power that is partially received from the induction coil (4).
