Abstract (en)

[origin: EP1916627A1] The method involves providing a data service e.g. internet service, by a network node, where the data service is executed in a provider server of a service provider. Data are generated for introduction into a label. An examination step is carried out by a program module for examining a token, and the generation of the label is influenced based on a result of the examination step. The program module is inserted into an intelligent document (305) e.g. index portable document format (iPDF), and a unique printing of the label is controlled by a program. Independent claims are also included for the following: (1) a computer program product comprising a computer program with instructions to perform a method for producing a label (2) a system for producing a label.
