Abstract (en)
[origin: CA2867919A1] The invention relates to a rail vehicle having a roof region in the longitudinal direction of which an air-conditioning duct is laid and which is bounded with respect to a passenger compartment by means of an inner ceiling, when the air-conditioning duct is composed in its longitudinal direction of at least two air-conditioning duct elements (1) which are connected to one another by means of a sealing frame (9) which can be pre-positioned. Furthermore, a method for constructing a roof region for such a rail vehicle is specified.
